PROFILE

I am an undergraduate Software Engineering student, currently pursuing a Bachelor's degree after completing an HND in Software Engineering with Merit. Specializing in web development, UI/UX design, and UX research, I am passionate about creating user friendly digital experiences.
Continuously expanding my skills through self learning and hands on projects, I am currently enhancing my expertise with a FreeCodeCamp certification course. Specially I am a proactive and dedicated learner.

PROJECTS

Implemented python based educational council chatbot

- The students manage their eductaional works using this chatbot
- For this Python is mainly used and html , css and js with Flask framework to connect backend and frontend.

E-Shift shifting system for a household company

- In this simply the users can reserve shipment and after that admin do their process in the application.
- For this C# (Windows Forms) is mainly used for this and for the database Microsoft SQL server was used.

The Crown Stays Hotel Reservation System

- In this simply the customer's can make reservations normally and the admin do thier processes in the system.
- For this html , css (bootstrap) and js used for the frontend and php was used for the all the backend part and also for the database this time phpmyadmin was used.

E-cloud video streaming mobile app interface designing

- In this simply the users can buy and watch any movie or music video and can create their own playlists and producer see their income from the app.
- For this figma was used to desgin the mobile app and used user research maps to do the ux research part.
